Modern living is going mobile

By creating coodo, the LTG Lofts to go GmbH & Co. KG has launched a flexible, mobile, and smart apartment, an iconic masterpiece, which brings a new vision and offers a dimension to the way we live, work, and travel. Coodo is a mobile and innovative module that can be placed and enjoyed anywhere on the world, be it in an urban environment or in nature.

Designed in Germany, coodo sets new standards for the future and satisfies the increased desire of our modern society for freedom, independence, and flexibility. Coodo not only promises, but delivers superior comfort while at the same time allowing for a fast, easy, and economical installation with minimal impact on the site and environment – a feat nearly impossible to accomplish with traditional homes. With coodo, your home can easily go on tour with you and travel with you, wherever life may take you. You will be at home anywhere in the world.

According to Mark Dare Schmiedel, CEO of LTG, “contemporary and state-of-the-art products must be measured by their sustainability”. All coodo components meet international environmental standards in terms of materials, recyclability, as well as environmentally friendly disposal and durability. After production, as well, resource consumption is kept at a minimum: The required space for a coodo is small and need not be sealed. Energy consumption is kept at a minimum, with energy supply being optimized. “We want to lead by example by having a great impact on society and proving that high ecological and sustainable standards do not stand in opposition to equally high standards for design and comfort, but can work in harmony through innovation”, Schmiedel states.

In addition, LTG Lofts to go is convinced that true luxury is defined by simplicity, thus giving us the freedom to concentrate on other things. Living in a coodo will bring ‘the big picture’ into view. It offers the opportunity to focus on the essentials and live in, and in harmony with, nature.

The vision of codo is a generous and communicative living and working experience by harmoniously fusing the space for living with its surroundings. The floor-to-ceiling high-standard glazing provides a boundless experience of space and a feeling of near-limitless landscape. The codo is manufactured in both aluminium and wood and is available in the design lines “**codo white edition**” (aluminium) and “**codo grey edition**” (wood). Furthermore, a codo is offered in different sizes and designs, available as a one-level and double-storey. An iconic model is certainly the watercodo, which can extend living onto the water. The interior it can be chosen from a number of options. Depending on the personal preference, a codo can get delivered either as a shell (plain), with basic interior (basic), or fully equipped (full).

The codo impresses through its various possibilities of potential applications: as a space for smart business solutions as well as an exclusive garden lounge, an innovative showroom or a luxury weekend residence.

The complimentary **codo app** (which can be downloaded under “codo” on [iOS](#) or [Android](#)) brings to three-dimensional life the unique codo experience – a state-of-the-art product on all levels.

The first codo produced in series has been installed in Switzerland in February of 2015, where it serves the staff members of the national air traffic control “Skyguide” as a retreat for relaxation and the occasional chat.

LTG Lofts to go GmbH and Co. KG was founded by Mark Dare Schmiedel in 2012. He was inspired to come up with the idea of codo during the construction of his own home in Berlin. “Why not create a new living space that combines and meets the desire of our modern society for freedom, independence, and flexibility all in one?” he asked himself. Since then he is passionate about his vision and mission – to bring a new dimension to the way we live, work, and travel. Supported by a team of five like-minded and equally passionate team members, he has moved his company headquarters from Berlin to Hamburg in May of 2015. Once a suitable location has been found, the offices will move into a codo in order to work and establish the codo idea all around the globe.
