Imagine living without borders — maybe on a beach, or perhaps in a forest. You can do just that with a mobile home called Coodo.

German company LTG Lofts to go has advanced habitable living into the future with the creation of Coodo, a flexible, mobile and smart unit that can be stationed and lived in almost anywhere.

Coodo was made with the purpose of creating a safe, practical space that connects with the natural environment around it. The unit has been designed with glass walls, offering dwellers floor-to-ceiling views of their surroundings. The heating, cooling and power systems are hidden throughout the walls of the unit for a seamless look.

The simple, yet futuristic mobile home can be placed in virtually any location — from an urban setting, to a rooftop or even the mountains. Coodo requires only a few foundation points to support itself.

Wheels can be added onto the mobile home, allowing owners the flexibility to change up their scenery. The transportable architecture is also ideal for properties that have hard-to-obtain building permits.

Coodo isn't simply for residential purposes, the unit could be used as a business meeting room, garden lounge or even a show room. The mobile home is also eco-friendly, as its materials, recyclability, disposal and durability have all been designed to meet international environmental standards.

For more details about Coodo visit its website [here](#).
